

Webinar: Socio-ecological approaches to health promotion

What methodological challenges in their application?

29th June 2.00-5.00 pm

The implementation of the socio-ecological approaches, especially settings-based approach to health promotion have recently received more attention in different settings, like universities, prisons, schools and sports clubs. While these approaches receive more recognition, their implementation and measurement, as well as researcher's positions to use them remain an important challenge. The purpose of this webinar is to question the methodological challenges of the application of socio-ecological and settings-based approaches in different settings and give specific focus to sports clubs.

This webinar has two main objectives:

- 1) Discuss the methodological challenges in the use of socio-ecological approaches, especially settings-based approach to health promotion
- 2) Describe the stakes of researcher's positions in regard to interdisciplinary work, project funding, publication strategies, as well as provide insights on the next steps for the socio-ecological approach development, especially in the sport setting.

Time frame	Intervention title	Speaker
2.00-2.15pm	Introduction of the panel and scope of the webinar	Anne Vuillemin, Christian Pradier
2.15-2.45	The Healthy Settings Approach: Theory, Practice, Opportunities and Challenges	Mark Dooris
2.45-3.15	Are mixed methods an answer to methodological challenges in the application of socio-ecological approaches?	Marie-Renée Guevel
3.15-3.45	General discussion about the approach	
3.45-4.15	Methodological challenges in measuring health promoting sports clubs, how to evaluate socio-ecological approaches?	Aurélien Van Hove
4.15-4.45	Doping in sports clubs: from individual to organizational responsibility	Fabien Ohl
4.45-5.00	General discussion about the application in sports clubs	

Speaker timing: 20 minutes presentation; 10 minutes for questions
